

## DoD Executive Agent

Office of the  
Assistant Secretary  
of the Army  
(Installations and  
Environment)

# Designing and Evaluation Zero Energy Housing for Military Installations

Heidi Anne Kaltenhauser,  
NDCEE/CTC

The NDCEE is operated by:  *Concurrent Technologies Corporation*

Technology Transition – Supporting DoD Readiness, Sustainability, and the Warfighter

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.					
1. REPORT DATE <b>JUN 2010</b>		2. REPORT TYPE		3. DATES COVERED <b>00-00-2010 to 00-00-2010</b>	
4. TITLE AND SUBTITLE <b>Designing and Evaluation Zero Energy Housing for Military Installations</b>				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) <b>National Defense Center for Energy and Environment (NDCEE), Concurrent Technologies Corporation, 100 CTC Drive, Johnstown, PA, 15904</b>				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT <b>Approved for public release; distribution unlimited</b>					
13. SUPPLEMENTARY NOTES <b>Presented at the NDIA Environment, Energy Security &amp; Sustainability (E2S2) Symposium &amp; Exhibition held 14-17 June 2010 in Denver, CO. U.S. Government or Federal Rights License</b>					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT <b>Same as Report (SAR)</b>	18. NUMBER OF PAGES <b>29</b>	19a. NAME OF RESPONSIBLE PERSON
a. REPORT <b>unclassified</b>	b. ABSTRACT <b>unclassified</b>	c. THIS PAGE <b>unclassified</b>			

# Partners and Performers

# Project Overview

- Use integrated design and energy modeling to demonstrate zero energy housing
- Validate the potential to provide cost effective zero energy housing
- Transfer project knowledge DoD-wide and beyond

# Project Phase

- Design – completed fall 2009
- Construction – began January 2010
- Monitoring – design complete, installation expected in Summer 2010
- Analysis – 12 month monitoring period
- Technology Transfer – in process throughout project

# Design Approach and Methods

- Held design team teleconferences to:
  - identify constraints/baseline conditions
  - set performance goals
  - identify specific technologies, tools, and strategies.
- Held two-day design charrette with multi-discipline, multi-organizational team
- Tools used:
  - Integrated Design: Replaces the traditional sequential design process by integrating multiple disciplines early in the process to help identify and optimize systems and reduce overall costs
  - Energy modeling and analysis
  - Life-cycle cost analysis

# Constraints

- Street exterior to be unaltered
- Baseline and ZEH to be placed in existing development plan
- Occupants historically not responsible for utilities
- Work within existing floor plan

# Baseline Design

- Duplex
- Four-bedroom
- Two-story dwelling
- 1,985 square feet of conditioned space per unit
- 2.5 baths
- Energy Star Rating

# ZEH Strategies

Reduce heat transfer through the envelope

Reduce solar heat gain

Reduce demand

Reduce consumption/miscellaneous loads

Provide on-site renewable energy source

Reduce heat  
transfer  
through the  
envelope

Reduce solar  
heat gain

Typical Eave Wall Cross-Section

Typical Design Construction:	ZEH Construction:
Total R-Value = 8.93	Total R-Value = 25.54

R-Value indicates the insulative value (resistance to heat flow) of the exterior walls

# Reduce Systems Demand

## Increase efficiency of HVAC

GSHP with De-superheater

High SEER air-to-air system

Ductwork sealed and in conditioned space

## Solar water pre-heat system

Flat Plate solar thermal water heating

120 Gallon high R value storage tank

On demand hot water backup

Central location for storage tank

All hot water plumbing insulated

Water distribution manifold plumbing

## Energy efficient lighting/appliances

Internal CFL's

External CFL's

Energy Efficient Appliances

# Reduce Consumption/Miscellaneous Loads

- Resident behavior / habits
- Timers on bath fans
- Control power strips
- Ability to view real-time usage

# Optimize Solar Power

Baseline Home

Net Zero Energy Home

# On-site Renewable Energy System

## Photovoltaic Modules

- 6 Strings of 11 panels in series 33 – 225 W panels per unit
- 7,425 W per unit

## Solar Production

- Clarksville, TN - 4.5 Sun Hours
- Production 9,447 kWh annually

# Design Progression - Modeling Results

Fort Campbell ZEH - March 2010

# Whole Building Performance Measurement

- Comparing typically designed duplexes with net zero energy duplexes
  - Matched Pairs analysis
- Comparing ZEH with average performance of Ft. Campbell residences
- Comparing ZEH with National Standards
  - Residential Energy Consumption Survey (RECS)
  - Center for the Built Environment (CBE) occupant satisfaction survey

# ZEH Performance Objectives

- 14 different Performance Objectives addressing design and performance measurement
- Design Objectives include:
  - Reduce *modeled* energy use
  - On-site energy generation is equal to or greater than modeled energy use
  - Reduce *modeled* potable water demand
- Performance Measurement Objectives include:
  - Reduce *measured* energy use
  - On-site energy generation is equal to or greater than *measured* energy use
  - Reduce end-use energy use

# Monitoring Equipment in the ZEH design

- Monitoring needs included in design specifications
- Metering points include:
  - Electricity meters
  - End use meters
  - Water meters
  - Indoor and outdoor temperature and humidity
  - Solar hot water
  - Photovoltaic panels
- In-home, user-friendly displays being selected

# Example of monitoring equipment in the ZEH design specification

- **Veris Industries E30 Branch Circuit Power Monitoring (BCPM) device**
  - Installed in the home electrical panel
  - Capable of monitoring 42 circuits
  - Connects directly to data acquisition device via MODBUS (RS-485) cables (provided by electrical contractor)
  - Monitors all sub-level electricity loads

# Identify and Train Occupants

- **Occupant Identification Criteria**
  - Willingness to participate
  - Number and age of family members
  - Expected typical occupancy hours
  - Monthly energy use for past year for each family
  - Electronic equipment typically used by each family

# Identify and Train Occupants

- **Occupant Training Strategy**
  - Develop and distribute occupant recruitment pamphlet
  - Discuss study goals and occupant expectations with potential occupants
  - Walk-through home with occupants to offer training on how to minimize energy use in the ZEH
  - Provide home operations guide
  - Communicate regularly (monthly) with occupants regarding energy use

# Ongoing Interaction with Occupants

- Monthly:
  - Provide written feedback on energy and water
  - Discuss over the phone
- Six months:
  - Meet in person and discuss usage patterns in depth
  - Provide refresher training as needed
- **GOAL: to help both the occupants and the research team understand energy use patterns**

# Next Steps

- Complete monitoring
- Summarize and report results
- Present results at energy and construction industry conferences
- Produce case study
- Develop ESTCP reports
- Incorporate lessons learned into over 40,000 military housing units that Actus Lend Lease is building nationwide
